

Crashes, Freezes and Lockups: The application I was in just crashed with a memory related error. What do I do?

Try allocating more memory to the application.

Find the original application (not the alias) on your hard drive.

Click on it ONCE.

Go to the File menu and select Get Info:Memory

Double the Minimum Size: and Preferred Size: settings, but change the Preferred Size: value FIRST.

Close the window and try the application again.
