

## *e-Mail: Why does QuickMail open up when I try to send an e-mail using Netscape?*

If QuickMail is still on your machine, it occasionally wants to send all e-mail.

[Logon to APS\\_XFD](#), open the Netscape f folder, and drag the NetScape Set Mailto application to your Desktop. Open that application and click on [b]Unregister.[/b]

Ideally, get what you need from QuickMail and throw away the QuickMail application.
