

## *Keyboards and Mice: The keyboard isn't responding, but I can move the mouse. What do I do?*

- Did you spill something in the keyboard? I know that sounds silly, but it has happened in the past.....
- Next, check the cables. Make sure the keyboard and mouse cables are plugged in and not loose.
- If the cables check out, then the application is probably frozen.  
If you're still having problems, refer to [Nothing\\\'s responding, not even the mouse. What do I do?](#)
